

# AI solutions around Ellucian

## Build practical AI capabilities for the systems and workflows you already run

ABCloudz helps higher education institutions design and deliver AI solutions around Ellucian SaaS and on-premises systems. For SaaS, we use SaaS-safe integration patterns around Data Connect and Ethos. For on-premises, we use the integration approach that best fits the institution's architecture and controls.

## What we help institutions build

### — Campus AI discovery and solution design

Identify the right use cases, define data and integration needs, and shape a practical MVP and rollout plan.

### — AI document intake and interpretation

Automate the understanding of scanned forms, PDFs, and image-based documents to reduce manual work and move requests faster.

### — Agentic AI and workflow automation

Embed AI into real campus workflows to interpret inputs, apply business logic, interact with connected systems, route work, and keep humans involved where needed.

### — Plain-English to SQL access for institutional data systems

Turn plain-English questions into validated, permissions-aware SQL queries across approved databases, data warehouses, and reporting systems.

### — Campus knowledge assistants

Deliver fast, reliable answers from institutional knowledge across websites, PDFs, databases, service content, and internal documents.

### — AI architecture and platform integration

Build controllable AI solutions around Ellucian and adjacent systems with secure integration, access control, and long-term flexibility.

### — AI-assisted Data Connect development

Use AI to streamline Data Connect design, development, and refinement for faster, more consistent delivery in Ellucian SaaS environments.

### — Course and pathway recommendation solutions

Support course guidance, skills mapping, and academic pathway decisions with AI-driven recommendations and analysis.

## Let's talk!

Planning AI around Ellucian SaaS or on-premises systems? Let's identify the right use case, design the right integration approach, and build an AI solution that fits your institution's data, workflows, and controls.

## Why ABCloudz for AI around Ellucian?

ABCloudz brings together two capabilities institutions rarely find in one partner: deep Ellucian delivery experience and practical AI solution engineering. We have worked with Ellucian-related modernization and delivery since 2011, have supported numerous paid initiatives since 2017, and are now an official Ellucian Service Partner. Our team has developed hands-on expertise across Banner, Colleague, Ethos, Insights, Data Connect, and other Ellucian technologies.

## Proven in the Ellucian ecosystem

ABCloudz has earned Ellucian Service Proficiency, Experience Platform Proficiency, and Insights Proficiency badges, along with the Ellucian SaaS Delivery Foundation badge. These designations reflect real delivery experience across Ellucian services, Experience implementations, analytics and reporting, and SaaS delivery fundamentals.

## How we typically deliver

## Platform-agnostic by design

We do not force institutions into a single AI vendor path. ABCloudz designs AI solutions around the client's use case, security requirements, integration landscape, governance model, and long-term operating needs. Depending on what fits best, we can work with OpenAI, Anthropic Claude, Codex, OpenClaw, AWS Bedrock, Copilot, Gemini, and open-source options. This gives institutions the flexibility to choose the right combination of models, tools, and platforms while keeping the solution aligned with Ellucian, adjacent systems, and institutional controls.

## About Us

ABCloudz, Inc. is a global technology firm providing solutions and services for managing data, applications, and infrastructure. With expertise across modernization, cloud, data engineering, AI/ML, analytics, and application delivery, we help institutions build secure, maintainable digital experiences that support real operational needs. Our focus on structured delivery, practical design, and long-term usability has earned the trust of customers across higher education and other industries.
